

At Brentwood Elementary, Racheal Landis has received a grant to continue with the school's STEAM program. Racheal has been teaching for seven years and recently began a club that helps students with their science, technology, engineering and math skills. Landis began this club not only to help the students enjoy STEAM learning, but also to prepare them for new jobs that will be created years from now. As the world of technology and engineering becomes bigger and better, it is important for adolescents to know how to work around new technology for the future. The students that participate in this club are always excited to attend and ask to meet extra days. "It's given them a different approach to solving problems," Landis says. Landis also added that the team work aspect has been great for the children. The STEAM club has proven to be beneficial for the students who participate, and with the help of the Legacy Foundation it can continue to grow.
